

Commercial & Forecast Optimization

TECHNOLOGY FOR
SUSTAINABLE ENERGY

Maximize the value of green energy

WHY THE C&F OPTIMIZATION SERVICE?

Optimize energy trading to increase EUR/MWh

The recent extreme market dynamics emphasized how volatile and insecure the revenue streams and Return of Investments are for the green energy players.

TokWise developed a solution to help you maximize profits by increasing the value of each MWh of green power on the market. Leveraging resilient technology and proprietary Machine Learning (ML) based algorithms, TokWise is adding an extra intelligence layer to trading operations to reflect all market dynamics and minimize costs. As a result, an optimized position is calculated to provide a higher P&L.

The C&F Optimization service has a successful outreach in Europe, where we supported industry leaders to optimize the bidding strategies across different markets, minimize imbalance cost, and mitigate the price volatility effects on the financial results.

ADDED-VALUE

01 INCREASED REVENUE

Innovative AI technology to maximize revenue from trading renewable portfolio on various energy markets

02 REDUCE COST

Minimize cost reflecting market dynamics

03 CONTINUOUS IMPROVEMENT

Ongoing performance monitoring and improvement from dedicated Data Science and Customer Success Team

03 LIMIT RISK

Limit risk of loss with additional risk management control

HOW'S WORKING

DELIVERY MODEL

- API-based service
- Proprietary AI models offered as standalone service

COMMERCIAL MODEL

- Pilot (3-to-6 months)
- Profit Sharing Model

OUR COMPANY

TokWise is an innovative technology to maximize the return of your renewable portfolio. The solution combines big data and advanced analytics, offered as Software-as-a-Service. Leveraging resilient technology and proprietary ML-based algorithms, TokWise is adding an extra intelligence layer to your trading operations to reflect all market dynamics and minimize your cost.

We support the growth of renewable energy by providing solid services to manage efficiently the green portfolio:

- Tailor-made Commercial and Forecast Optimization Service designed to optimize the trading and return of each MWh renewable energy.
- Software-as-a-Service Portfolio Management Suite to connect the assets and the market and orchestrate all activities from one single place.
